NOTE ON CERTAIN DIFFERENCE EQUATIONS WHICH POSSESS AN UNIQUE INTEGRAL By J. J. Sylvester, Savilian Professor of Geometry in the University of Oxford. For greater simplicity suppose in what follows that a difference equation is expressed in terms of the arguments I shall call $ux+f$ the highest and ux the lowest argument respectively, or collectively the extreme or principal arguments, and the degrees in which they enter into the equation the upper and lower or extreme or principal degrees. It is these partial degrees rather than the total degree of the entire equation which determine the essential character of the solution. The substance of the following exposition formed the subject of a communication made on Dec. 1st at the second meeting of the Oxford Mathematical Society which has just started into existence. VOL. XVIII. I If w_i is the upper degree and $M_0, W . M .$, be given it is obvious that for any value of x higher than (-1) , ux will have $w_i M + 1$ values, and consequently in general there will be an infinite number of integrals whether complete or of a given order...
